Manual Profile

Field	Value
Intended audience	Data-entry officers, supervisors, trainers, and support teams
Current role purpose	Structured capture, bulk import, registry maintenance, claims posting, and controlled data-quality improvement.
Default landing page	My Tasks
Role type	Structured capture and reconciliation role
Current access note	This role combines form-based capture with governed import and claims-management capabilities. Accuracy and review discipline are therefore essential.

1. Purpose and Role Position

The Data Entrant role is the main structured-capture role in the application. It can create and update staff-due records, maintain registry entries, run bulk imports, manage arrears entries, upload suspensions, and submit life-certificate updates. Because this role has strong data-changing authority, the standard expected behavior is careful preparation, template discipline, review of import outputs, and immediate escalation of anomalies instead of working around them.

2. Access Scope

2.1 Primary Working Pages

Menu / Workspace	How this role uses it
My Tasks	Work assigned items, add comments, update task status, and progress workflow handoffs.
Staff Due for Retirement	Capture, review, filter, and progress staff-due records through governed intake and verification steps.
Add Staff	Create a new staff-due record with identity, service, and workflow information.
Edit Staff Record	Correct or complete a staff-due record where the current role has edit rights.
View Staff	Inspect full staff-due detail before routing, verification, or handoff.
Pension File Registry	Search pension files, inspect linked records, open registry details, and use life-certificate or delete-request tools where authorized.
File Tracking	Track file custody, movement out of registry, receiving

	office, and return status.
Claims	Review arrears exposure, payments, accountability state, suspensions, and related analytics.
Dashboard	Review live workload, analytics, workflow pressure, compliance signals, and governed management views.
Application Status	Review where a case sits in the workflow and confirm current progress state.
Messages	Exchange controlled operational messages, updates, and clarifications with other users.

2.2 Support and Reference Workspaces

Menu / Workspace	Typical purpose
Benefits Calculator	Estimate service-based pension outputs using the configured retirement formulas.
Podcast	Watch guided pension information videos and official explanatory content.
Document Viewer	Open linked documents in a controlled preview workspace.
My Profile	Review personal account information, role label, and current account details.
Edit Profile	Maintain permitted personal account fields and credentials.

2.3 Default Governed Capabilities

Permission / Control	Capability	Operational meaning
staff_due.edit	Create and update staff-due records	Capture and correct staff-due records through the supported forms and workflow tools.
staff_due.bulk_upload	Bulk upload staff-due records	Import approved staff-due schedules from template-driven CSV or XLSX files.
staff_due.delete_request	Request staff-due deletion	Submit a staff-due record for delete review with justification and audit trace.
registry.edit	Create and update registry records	Open the registry workspace in edit mode, maintain file data, and save governed changes.
registry.bulk_upload	Bulk upload registry files	Import approved pension registry schedules in bulk using the governed registry import flow.
registry.life_certificate.submit	Submit life certificates	Record life-certificate submissions and update the linked beneficiary contact profile.
registry.delete_request	Request registry deletion	Queue a registry record for governed deletion review instead of removing it directly.
registry.benefits.monthly_salary.edit	Maintain monthly salary input	Update the salary input that feeds current benefits calculations where the edit control is exposed.
file_movement.record	Record file movement	Log file movement out of registry custody with destination, reason, and dates.

claims.arrears.view	View claims and arrears	Use the claims workspace for visibility, analytics, exports, and case-level review.
claims.arrears.manage	Manage arrears ledger	Create arrears entries, post payments, submit accountability, and reconcile balances.
claims.suspension.upload	Upload suspension records	Import suspension schedules and preserve row-level suspension reasons during reconciliation.

2.4 Work Normally Outside This Role

- Delete-queue processing remains supervisory or administrative.
- Budget maintenance and broader governance settings are not default data-entry work.
- Payroll cycle management and system configuration are outside this role.

3. Standard Daily Operating Procedure

1. Start from tasks or the relevant module and confirm the exact record or batch you are meant to process.
2. Use the correct governed form or template rather than free-form data manipulation.
3. Review validation or import-review output before finalizing a batch.
4. Post claims and suspension data only after confirming beneficiary identity, period, and source evidence.
5. Hand off exceptions promptly when supervisory or policy judgment is required.

4. Module Guidance

4.1 Structured Record Capture

Data entrants are expected to keep staff-due and registry records operationally clean through disciplined form use and evidence-backed editing.

Standard Steps

6. Open the exact target record using search, filters, or a task handoff.
7. Complete governed fields carefully and avoid partial saves with uncertain data.
8. Use life-certificate tools when the case requires beneficiary compliance updates.
9. Request deletion through the queue when a record should be removed from normal use.
10. Recheck calculated or dependent fields after major edits so the next role sees a coherent record.

Control Points

- Do not enter guessed dates, identifiers, or salary inputs.
- Life-certificate submissions must match real evidence.
- Delete requests are for exceptional cleanup, not convenience.

4.2 Bulk Import Operations

The live platform gives this role bulk-upload rights for staff-due and registry schedules. This is a high-impact capability and must be used with review discipline.

Standard Steps

11. Download and use the current template rather than a locally altered spreadsheet.

12. Complete required source fields and keep headers unchanged.
13. Run the review or dry-run path first and inspect the generated import-review file.
14. Correct validation problems in the source file and rerun review until the output is acceptable.
15. Only then execute the final import and preserve the resulting evidence or review output.

Control Points

- Blank or misaligned columns can damage record quality if not caught in review.
- Never bypass the review file when one is produced.
- Bulk upload is not a shortcut for unapproved source data.

4.3 Claims Ledger and Suspension Work

This role can both view and manage the claims workspace, including arrears posting and suspension imports.

Standard Steps

16. Open the claims workspace and verify the correct beneficiary and claim type before creating or editing a record.
17. Use the appropriate payment, bulk-payment, gratuity-schedule, or suspension-upload flow rather than forcing one tool to do another task.
18. Confirm period, amount, accountability context, and supporting evidence before saving.
19. Review import-review output for suspension or bulk-payment files before accepting the final upload.
20. Escalate unexplained discrepancies or policy-sensitive cases to supervisory roles promptly.

Control Points

- Financial period and beneficiary identity must be correct before every save.
- Accountability-related fields should reflect real supporting evidence.
- Claims management rights do not remove the need for supervisory escalation where policy or liability is unclear.

5. Governance and Control Rules

- Use the correct form or import template for every data-changing action.
- Review import and validation output before finalizing batch work.
- Keep claims, registry, and staff-due data aligned to real evidence.
- Escalate supervisory, queue, or policy decisions instead of improvising them.
- Preserve a clean audit trail through comments, statuses, and governed save actions.

6. Handoffs and Escalation

Situation	Required next step
Delete approval is required	Send the queue item to OC/Pension-equivalent supervision or an administrator.
Assessment or approval review is needed	Hand the case to Assessor, Auditor, or Approver through the task workflow.
Budget or financial-governance decision is required	Escalate to OC/Pension-equivalent supervision.
Import error suggests technical failure rather than bad source data	Escalate to administrator or support with the review output.

7. Common Issues and First Responses

Issue	Recommended first response
Import review shows many row-level failures	Correct the source template first and rerun the review; do not import anyway.
Claims save is blocked	Recheck beneficiary, period, amount, and whether the role actually has the required current permission.
Registry action seems unavailable	Confirm whether the record is in create or edit mode and whether the effective permission was overridden.
Data conflict appears between staff-due and registry records	Pause the case, correct the authoritative source, and note the change clearly.

8. Working Checklist

- Confirm the exact record or batch before starting work.
- Use templates without changing headers.
- Review every validation or import-review file.
- Verify financial period and beneficiary identity before claims actions.
- Escalate queue, policy, and technical failures promptly.
